Focused Physical Assessment

	3	2	1	0	Score
Subjective Data: Statements by the patient related to the body system being assessed.	Systematically collects subjective data related to the specific system being assessed. Rich repository of information present in the text box for the specific body system. Review of system questions completely covered for the specific body system. No spelling or grammatical errors present.	Three answers to review of system question for the specific body system present in the text box documentation area. No spelling or grammatical errors.	Two answers to review of system question for the specific body system present in the text box documentation area. Spelling and/or grammatical errors present in data provided.	No subjective data present in the physical assessment documentation.	3
Inspection: The specific details related to the body system, anatomical region, or condition under assessment.	Thorough and detailed data related to inspection of the body system present in the focused assessment documentation. Documentation includes physical characteristics, behaviors and any odors.	Missing one documentation requirement (physical characteristics, behaviors, or odors) related to inspection. Documentation lacks level of detail required for body system.	Missing two or more documentation requirements for the body system related to inspection. Documentation lacks detail and thoroughness	No data related to inspection present in the physical assessment documentation.	3
Palpation: Feeling the body part being assessed for firmness, shape, location.	Documentation of assessment findings is thorough and detailed. Includes light palpation and deep palpation. Describes all textures, surface lesions, lumps, or inflamed areas palpated.	Missing one documentation requirement (texture, lumps, inflammation, lesions). Documentation lacks level of detail required for body system.	Missing two or more requirements for the body system related to palpation. Documentation lacks detail and thoroughness.	No data related to palpation present in the physical assessment documentation.	3
Percussion: Using tapping motions to produce sounds that indicate the presence of air, fluid or solid filled spaces in the body.	Documentation of percussion findings is thorough and includes descriptions such as tone obtained (dull, flat, resonant, and tympanic), intensity, pitch or frequency, duration and quality, as well as use of direct or indirect percussion.	Missing one documentation requirement (intensity, pitch, frequency, duration and quality). Documentation lacks level of detail required for body system.	Missing two or more requirements for the body system related to percussion. Documentation lacks detail and thoroughness.	No data related to percussion present in the physical assessment documentation.	3
Auscultation: Using the stethoscope bell and diaphragm to hear sounds associated with the movement of air or fluid in certain body systems.	Documentation of auscultation findings is detailed and thorough. Findings include pitch, duration, quality, and intensity. Documentation includes location of findings.	Missing one documentation requirement (pitch, duration, quality, and intensity). Documentation lacks level of detail required for body system.	Missing two or more requirements for the body system related to auscultation. Documentation lacks detail and thoroughness.	No data related to auscultation present in the physical assessment documentation.	3
